

Target Variable Distribution

Numeric Features by Diabetes Status

BMI Distribution by Diabetes Status

Diabetes Proportion by Age Group

Pearson Correlation Matrix

Binary Feature Prevalence by Diabetes Status

Decision Tree (Best CP)

KNN: Accuracy vs k

AUC-ROC Comparison

ROC Curves – All Models

Random Forest – Variable Importance

Logistic Regression: Odds Ratios (95% CI)

RF: Sens/Spec/F1 vs Threshold

5-Fold CV AUC by Model

Random Forest – Confusion Matrix

Feature Engineering Impact on RF AUC

Fairness by Sex

Fairness by Age Group

Fairness by Income Group

Calibration – Logistic Regression

Points on dashed = perfectly calibrated

Calibration – LDA

Points on dashed = perfectly calibrated

Calibration – Random Forest

Points on dashed = perfectly calibrated

SMOTE vs No SMOTE

SHAP Feature Importance (RF)
